

BONANSEA:
craftsmanship, art and design

The future is craftsmanship. This is the idea that has guided Maurizio Bonansea in his activities for over 20 years. In Buriasco, a few kilometres from Turin, his company creates, designs and manufactures spiral staircases, staircases for interior use, railings, seats, tables and other products born of passion and experience. Maurizio's creative spirit, combined with great manual skills, careful and scrupulous material selection and undivided attention to detail, gives life to objects that are rooted in the past but speak the language of the future.

Craftsmanship and design go hand in hand in the hyperbolic structures made from iron and steel that have always been the symbol of this Piedmont-based company. Lightness, elegance, sinuosity and dynamism are the distinctive traits that characterise the products bearing the signature of Bonansea.

Solidity and lightness, light and shadow, a minimal look enriched by the unique characteristics of different types of wood... this is how helical staircases, railings, fireplaces, gates, front doors come into being in an incessant interplay of opposites... this is why since 1989 they have been the heart and the essence of Bonansea's production.

The best evidence of this approach and this desire to create something new – without ever repudiating one's roots and tradition, but rather always trying to enhance their value – is provided by the many artistic collaboration projects undertaken by Maurizio Bonansea over the years. We should mention in particular the works produced in collaboration with Elio Garis, an artist who is able to alternate forms conveying an unmistakable feeling of airiness and others with a more figurative quality.

BONANSEAHOME

With Elio Garis, Bonansea inaugurated an important division, dedicated to the home: BonanseaHome was established with the aim to create contemporary objects and furnishing complements made from materials, such as wood, glass and iron, that have a timeless appeal. Each and every object can be personalised, in that it has been conceived to adapt harmoniously to the home and its inhabitants. Objects made to measure, created according to "sartorial" criteria, because space should be inhabited and enlivened, not invaded. Craftsmanship, art and design join forces to create balance, beauty and harmony.

THE STAIRCASES

Indubitably, ladders are among the most significant and characteristic elements in our daily life. Over the years, Bonansea has been able to conceive and manufacture staircases of all types and sizes, making simple structures into small masterpieces. Classic and design staircases, with a contemporary flair combined with an antique quality, they invariably feature an original content, which is the distinctive trait of Maurizio Bonansea's modus operandi: none of the objects are mass produced, each of them is unique and suited to the personality of the customer.

The ladder becomes more than a mere instrument and takes on the significance of an object that enhances the value of the home environment, contributing to make the interior space harmonious and well-balanced.

BONANSEA

SEATS

From the collaboration with artist Elio Garis stems outdoor and indoor furniture characterised by soft lines, ethereal volumes, strong, lively colours. Seats inspired by this new interpretation of reality are designed with the aim to brighten the environment, by enriching it with light, shapes and colour. The seats can be personalised with various accessories (padded seats, upholstered with fabric or leather) and wooden tops (tables).

ELICA

This is a new project, a versatile idea for a structure that echoes the rounded lines of spiral ladders, the elements that have always characterised Maurizio Bonansea's product line-up.

The name Elica gets across the salient features of the new creation: lightness, movement, aerodynamic torsion.

Elica is like a sculpture "in the round," it has open compartments to accommodate all those objects that are part of home living and may be found in many other environments: books, CDs, kitchen implements, bottles... The beauty and the functionality of Elica reside in its movement (the structure revolves) and its capacity to take advantage of the aerial part of a room.

Like all the works created by Maurizio Bonansea, Elica can be personalised with different finishes and a rich choice of materials.

Self-standing, revolving, multifunctional element in steel, RAL colour lacquered or glossy steel, with shelves in various materials.

Dimensions:

h from 150 cm to 6 m

diameter: 22 or 30 cm

Colour: all RAL COLOURS + Corten finish

Materials: steel, glossy stainless steel

Electrically operated rotation (option)

Lit shelves (option)
